Figure 3; 32pp; English.

Figure 3; 32pp; English.

It is CDNA from tobacco mosaic virus (TMV) infected tobacco plants.

It contains the sequence from two independent cDNA clones -
pNtSNNcPRIb/81 and pNtSNNcPRIb/1. Differences between the two clones a
shown in the Features Table. Expression of a recombinant DNA sequence
which includes a PR-1 promoter in a plant enhances the hypersenstivie
response of the plant to an invading pathogen.

CDNA libraries were prepared from human thyroid gland poly(A in lambda gt11 and gt10. These were screened using probes de from DNA encoding similar enzymes in Xenopus laevis. Three (were isolated from the gt10 library, including gt10ch7101. Restriction analysis indicated that gt10ch7101 encoded a ditype of enzyme to one of the other two clones. The DNA can inserted into vectors for expression in E.coli or (more eff

                                                                                                                                                                                                                                                                   Disclosure; pp; English.

CDNA libraries were prepared from human thyroid gland poly(A) RNA in lambda gtil and gtil. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gtil library, including gtilohT2.

Restriction analysis indicated that gtilochT2 encoded a different type of enzyme to one of the other two clones. The DNA can be incompared into vectors for expression in E.coli or (more efficient content)

They can be used to facilitate tagging of most human genes, for mapping locations of expressed genes on chromosomes, for individual or forensic identification, for mapping locations of disease-associated genes, for identification of tissue type, and for prepn. of antisense sequences, probes and constructs. EST00924 has a "poor" coding probability as evaluated using the coding-region prediction program CRM. See also Q59041-Q61440. Sequence 391 Bp; 97 A; 106 C; 115 G; 71 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 promoted cell death. An HL-60 cDNA library constructed in lambda gtl0 vector was screened with the cDNA insert of pTR01-230. Two independent clones, lambdal and labmda2, almost completely overlapping and carrying cDNA inserts of about 2.3 Kb were analysed. Lambdal cDNA clone encompasses the 5'-UTR, short coding region(s) and a relatively long 3' UTR that constitutes more than 60% of the cDNA clone. The nt. sequence of the cDNA carried by lambdal andt predicted AA pattern are present in Q89835/R74204. The ORF is preceded by an extremely GC-rich 5' UTR and potentially codes for a protein consisting of 102 AAs with calculated MW of 11.2 kDa. It has an isoelectric pt. of 10 and is rich in prolines. Q96296/c
       Transcriptional regulator specific for cells expressing prostate specific principles of used to express toxins, immunostimulants or anti-sense cpds., for treatment and prevention of prostatic cancer or hypertrophy for treatment and prevention of prostatic cancer or hypertrophy principles. The forest of the human provential states are specific antiper to -5824 bp. The fragment runs from a constrate specific antiper to -5824 bp. The fragment runs from a constrate specific antiper to the Hindiii site at +7 bp. The mumbering system is +1 at the transcriptional start site of PSA mRNA (Lundwall, A., 1989, Blochem. Blophys. Res. Comm. 161: 1151-59). The coding region of PSA starts at +42. An approx. 2.5 kbp fragment from about -2850 to about -5350 serves as a prostrate specific enhancer (PSE) in conjunction with a promoter to function to initiate transcription in prostrate cells. This can be isolated from the human genome as a XbaI-ApaI 2.5 kb fragment and this enhancer is antical transcription of the control of the c
antigen. There is a naturally-occurring PSA promoter spanning the segment from about '541 to +7, particularly '320 to +7 of the human PSA gene. The promoter of PSA has been reported (Riegman et al., 1989, Biochem. Biophys. Res. Comm. 159: 95). The promoter from '320 to +7 contains a TATA-box, a GC-box and hormonal response element at -170 to -156. Sequence 5836 BP; 1408 A; 1296 C; 1568 G; 1564 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-JUL-1995;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score
